This record is a compilation of reliability information pertaining to the 6000-pound gasoline-engine-driven forklift truck and its subsystems and major components. The vehicle is used in warehousing operations and is described generally by the nomenclature Army Model MHE-193 (FSN 3930-738-5938). The record serves as the primary management-control tool for the truck's reliability. □ This forklift check book is designed to provide forklift operators with a safety and maintenance checklist to be filled out before each shift. □ It can be used for vehicles powered by either electric or internal combustion engines. Pre-Operation Inspection - The pre-operation inspection is a daily or pre-shift inspection carried out by a trained lift truck operator (or qualified designated person) before the lift truck is operated. On completion of this inspection, if the truck is found to be in any way unsafe, the matter shall be reported immediately to the user's designated authority, who shall ensure that the truck shall not be operated until it has been restored to a safe operating condition; or in need of repairs not related to safe operation, the matter shall be reported immediately to the user's designated authority, who shall ensure that a schedule is established to carry out the repair work. Written for the more than 1.5 million powered industrial truck operators and supervisors in general industry, as well as those in the construction and marine industries, this Second Edition provides an updated guide to training operators in safety and complying with OSHA's 1999 forklift standard. This

edition of Forklift Safety includes a new chapter devoted to the new OSHA 1910.178 standard and new information regarding dock safety, narrow aisle trucks, off-dock incidents, tip-over safety, pallet safety, and carbon monoxide. The overall objectives of this project were to evaluate the performance, operability and safety of fork lift trucks powered by fuel cells in large distribution centers. This was accomplished by replacing the batteries in over 350 lift trucks with fuel cells at five distribution centers operated by GENCO. The annual cost savings of lift trucks powered by fuel cell power units was between \$2,400 and \$5,300 per truck compared to battery powered lift trucks, excluding DOE contributions. The greatest savings were in fueling labor costs where a fuel cell powered lift truck could be fueled in a few minutes per day compared to over an hour for battery powered lift trucks which required removal and replacement of batteries. Lift truck operators were generally very satisfied with the performance of the fuel cell power units, primarily because there was no reduction in power over the duration of a shift as experienced with battery powered lift trucks. The operators also appreciated the fast and easy fueling compared to the effort and potential risk of injury associated with switching heavy batteries in and out of lift trucks. There were no safety issues with the fueling or operation of the fuel cells. Although maintenance costs for the fuel cells were higher than for batteries, these costs are expected to decrease significantly in the next generation of fuel cells, making them even more cost effective. Eaches or Pieces Order Fulfillment, Design, and Operations Handbook offers insights for warehouse, distribution, or logistics professionals to make their "eaches or pieces" This catalog describes the functions, operation, uses, specifications and special attachments of the various models of the Schubmaster "S" Fork-lift truck made by Ewar of West Germany and distributed in Italy by Oto Melara. This record is a compilation of reliability information pertaining to the family of gasoline-engine-driven fork-lift trucks used in warehousing operations. The record serves as the primary management-control tool for the truck's reliability. This guidance is relevant for anyone with responsibility for the safe operation of lift trucks, eg employers, controllers of worksites, managers, supervisors or operators. Other people involved with lift trucks, eg TU health and safety representatives, may also find it useful. The guidance does not, however, replace formal training. The main areas covered are: the law; types of lift truck; lift truck operators; training; authorisation to drive; the working area; protecting pedestrians and operators; operation of lift trucks; trailers and loading platforms;

maintenance; and two appendices covering training bodies and medical standards for lift truck operators. This is the third edition of CSA B335, superseding the previous editions- 2004 and 1994. This Standard specifies the key elements of a lift truck safety program and also provides recommended qualifications for lift truck trainers and maintenance technicians and personnel.
